

Residential Drainage Stack Replacement

The quality of life in a building depends on several factors, one of which is effective drainage. In many residential blocks these SVP (Soil Vent Pipe) systems are often overlooked, but they play a crucial role in ensuring that residents are comfortable and safe. Poor drainage can result in a range of problems, from unpleasant smells and minor leaks to complete flooding of homes.

Pam Building offers replacement drainage solutions for low, medium and high rise blocks. Our systems are preassembled and can be installed while the residents remain living in the homes.

Our drainage systems are:

Manufactured in the UK & pre-assembled in our factory

Easy to install & A1 Fire Rated

Designed to last up to 70yrs

Made from 99% recycled material

100% recyclable at end of working life

The best in class for acoustic properties

We also offer:

- Surveys and condition reports
- A network of trained installers
- Key stage inspections
- Full support throughout the process
